

chat-term cheat sheet

A message that starts with `.` is a command. Anything else is typed into your terminal, then Enter.

START HERE

- 1. `.projects` - list your project folders
- 2. `.open 2 claude` - open folder 2 and start claude (or codex, gemini, any command)
- 3. Type your request as a normal message.
- 4. A menu? Send its number, or use `.up` `.down` `.enter`
- 5. `.screen` - show the whole screen. `.c` - stop (Ctrl-C)
- 6. `.ss` - your sessions. `.s 2` - switch to one

DIRECTORIES

<code>.pwd</code>	show the current folder
<code>.ls [path n] [-a]</code>	list files, numbered
<code>.tree [path n] [depth]</code>	folder tree (default depth 2)
<code>.cd <path n></code>	change folder
<code>.cat <file n> [from-to]</code>	show a file
<code>.projects</code>	list project folders, numbered
<code>.open <n folder> [cmd]</code>	new session in a folder

SESSIONS

<code>.ss</code>	list tmux sessions, numbered
<code>.s <n name></code>	switch to a session
<code>.new [name] [dir] [cmd]</code>	start a new shell session
<code>.back</code>	switch to the previous session
<code>.detach</code>	stop viewing; session keeps running
<code>.kill [n name]</code>	end a session (asks first)
<code>.yes</code>	confirm a pending kill
<code>.rename <new-name></code>	rename the active session

KEYS

<code>.enter</code>	press Enter
<code>.esc</code>	press Escape (interrupts Claude/Codex)
<code>.tab</code>	press Tab
<code>.stab</code>	press Shift+Tab (Claude: cycle modes)
<code>.up</code>	arrow up
<code>.down</code>	arrow down

.left	arrow left
.right	arrow right
.bs	backspace
.space	press Space
.c	Ctrl-C (stop a program)
.d	Ctrl-D (end input / exit a shell)
.z	Ctrl-Z (suspend)
.l	Ctrl-L (clear screen)
.key <keys...>	any tmux key names
.raw <text>	type text without pressing Enter

VIEW

.screen	show the whole current screen
.more [lines]	screen plus scrollbar (default 60)

OTHER

.help [all command]	how to get started (add all for every command)
.guide	cheat sheet picture to keep on your phone
.status	bridge uptime, memory, active session

Numbers refer to the last list shown: **.ls** then **.cat 3**.

Key commands take a repeat count: **.down 3**. To type text that starts with ., begin it with **..**.

.help <command> explains one command with examples.
